

{//}

1. قم بعمل برنامج يعرض أسماء الطلاب ودرجاتهم التالية
بالشكل التالي

Print the students' names and grades in the
following form.

```
student_names = ["Mohamed", "Ahmed", "Ali", "Sara"]  
  
student_grades = [[96, 78, 82, 80], [86, 92, 98, 90],  
[76, 88, 90, 72], [78, 86, 98, 88]]
```

```
Student: Mohamed  
Grades:  
96, 78, 82, 80  
-----  
Mohamed has an average grade of 84.00
```

{codezi//a}

{//}

2. باستخدام unpacking operator قم بجعل القوائم التالية داخل قائمة واحدة

Using unpacking operator make these lists into one list

```
# make these lists into one list using unpacking operator
grades1 = [96, 78, 82, 80]
grades2 = [86, 92, 98, 90]
grades3 = [76, 88, 90, 72]
grades4 = [78, 86, 98, 88]
```

{codezi//a}
